homes.me CRM

Team test audit

Mobile design + live web CRM, tested by one owner and four brokers

What	How it was tested
Mobile design (53 screens)	5 testers tapped through a full working day each in a phone simulator: about 300 steps, 400+ screenshots
Live web CRM (crm.homes.me)	Walked through as Admin on 12 Nov 2026. Looked only: no lead was saved, nothing assigned to real agents
Notifications	Design checked event by event. Live push could not be tested because it is not switched on (see page 4)

Prepared for Emir Dulovic, Founder & CEO · 12 November 2026

1. The verdict

The design is a good picture of the product, but it is not yet a safe build plan. The screens look right and the main ideas work (check-in rule, WhatsApp tracking, VIP hand-off, attendance colours). When five people used it like a real working day, they found many places where a flow cannot be finished, where two screens disagree, or where an owner job has no screen at all. If Claude Code builds from it as it is, those gaps go into the product.

The live web CRM is further along than the design assumed. It already has a phone layout, install to Home Screen, light and dark theme, a duplicate-number check, a 7-step import and the code for phone notifications. The notifications are simply not switched on.

Findings by tester

Tester (role)	Focus	Blocker	Major	Minor	Idea
Emir (owner)	3 lead paths, team control, attendance oversight, content	6	31	13	2
Rocky (broker)	Morning, check-in rule, calling, dialer	0	24	22	3
Talha (broker)	Adding a lead and the full life of a lead	1	32	19	2
Yuliia (broker)	Calendar, meetings, projects, AI, dark theme	1	22	30	2
Sultan (broker)	Working outside, attendance, profile, card, settings	0	14	15	2
Total: 241 (some overlap between testers)		**8**	**123**	**99**	**11**

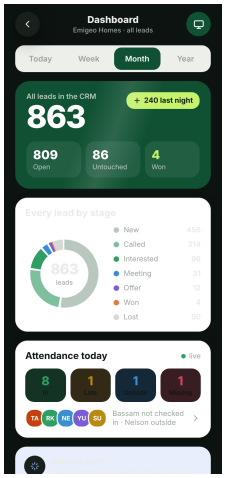

Blocker = the role cannot do its job. Major = works but wrong, confusing or missing an important step. Minor = polish.

What I confirmed myself

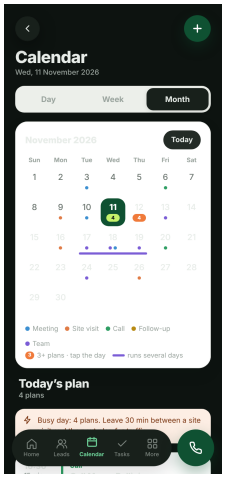

I re-ran the most serious findings in the simulator and all of these are real: a lead saves with empty name and phone; "Call all 12" skips the check-in rule; the dialer always shows the same lead; search results never change; a new plan can only be on 4 fixed days; Pipeline call buttons do nothing; Import has no upload step; there is no leave approval screen; checking out blocks calls again. I also opened the published design in the browser and confirmed the dark theme problem below.

One correction from me

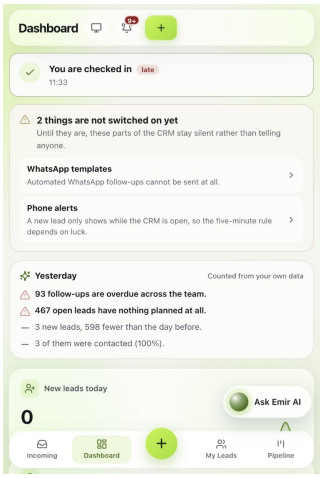

The dark theme I delivered this morning does not work in the real published design. Cards stay white while the text turns pale, so most text cannot be read. I had checked it only in my own preview tool, where it looked fine, and told you it worked. That was wrong. The fix is known (colours must be theme variables) and is first on the fix list.

Dark theme: owner dashboard, white cards

Dark theme: calendar

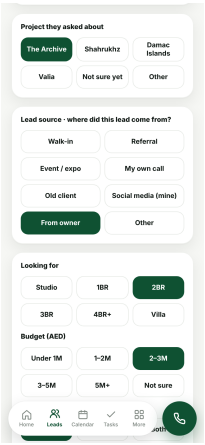

Live web CRM today on a phone-width screen

2. The three ways a lead comes in

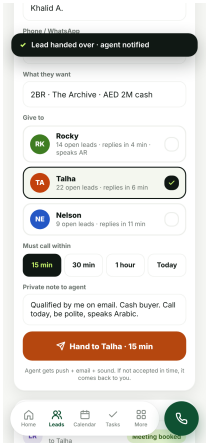

Path	Live web CRM today	Mobile design	Verdict
1. Owner gets a lead by email, qualifies it, hands it as VIP	Add lead (3 steps) lets Admin pick any agent, with each agent's open-lead count. No VIP mark, no deadline. Source list has no "From owner / Email".	Two unconnected screens. Add lead has "From owner" but only "Me" or "Leave in Incoming". Hand a VIP lead asks for the name and phone again as free text, lists only 3 agents, and after "Hand" nothing appears in "My handed leads".	**Blocker**
2. Bulk Excel import	Works: Upload, Map columns, Clean, Duplicates, Settings, Assign, Import. Last import 687 rows: 601 created, 86 skipped.	Opens on step 3 with Upload and Clean already ticked. No file choice, no column mapping, no duplicates list, no desk or Incoming choice. Split numbers do not add up (4 × 42 = 168, button says 212).	**Blocker**
3. Agent adds own lead	Works, with a duplicate warning ("TEST Claude is already here, with Abdullah Mahi"). With a duplicate, Next does nothing and does not say why.	Form is rich (country picker, source, Telegram). But it saves with empty name and phone, never shows a duplicate result, and typed text is wiped when a country or a source box changes.	**Blocker**

What to do

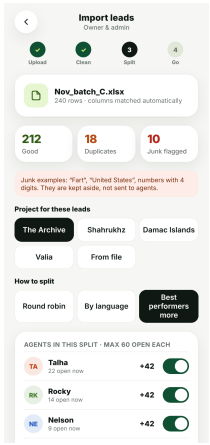

- **One flow for the owner:** add the lead once, then "Give to" (all agents, who is in the office now), VIP switch, call deadline, private note. The agent sees that note on the VIP card.
- **Keep the live 7-step import** and give it the new look. Do not rebuild it from the design.
- **Required fields and the live duplicate check** go into the mobile Add lead form.
- The live site runs a mail-reading job ("Imap Poll"). Ask your developer what it reads: it may be able to bring email leads in for you to qualify, instead of typing them.

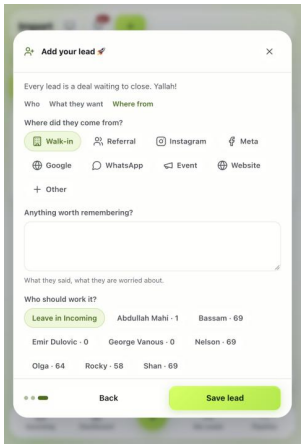

Design: "From owner" but no agent to pick

Design: handed, but not in the list

Design: import starts at step 3

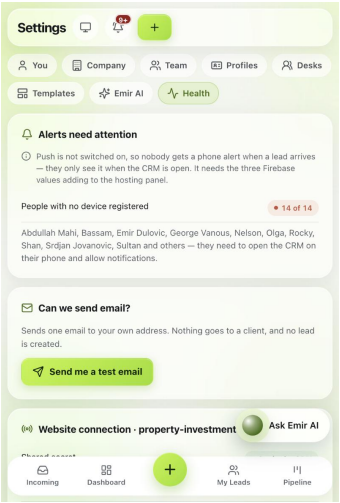

Live: Admin can pick the agent

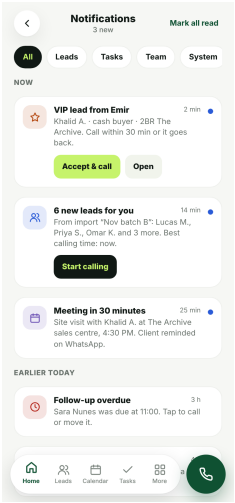

3. Notifications, A to Z

Live web CRM today

- **No one gets a phone alert.** Settings › Health says: "Push is not switched on… It needs the three Firebase values adding to the hosting panel." People with no device registered: **14 of 14**.
- The code is already there: the site installs to the Home Screen, and a tapped notification opens the right lead, with a Call button. So this is a set-up job, not a build job.
- Because of this the 5-minute rule "depends on luck" (the dashboard's own words). Median first reply is **63,935 seconds (about 18 hours)**; the target on screen is 30 seconds.
- The in-app list has **17 identical messages** "3 leads came back at once" from the same day. They should be one grouped message.
- WhatsApp templates: 16 not approved, so automatic WhatsApp follow-ups cannot be sent.

Live: Settings › Health

Design: notification list, 4 of 6 items cannot be tapped

Mobile design: event by event

Event	Who should get it	In the design?	Tap opens
New lead / import batch for me	Agent	Yes	Dialer, but skips the check-in rule
VIP lead from owner	Agent	Yes (card, list, settings)	"Accept & call" opens the lead but does not accept
VIP accepted / not accepted in time	Owner	Words only ("Emir notified")	Nothing designed
Warning before a lead is taken back	Agent	No	Nothing
Follow-up due / overdue	Agent	Yes	Item cannot be tapped
Meeting in 30 minutes	Agent	Yes	Item cannot be tapped
Meeting result due before 21:00	Agent	No	Nothing
Client opened my link	Agent	Yes, on My Day	Cannot be tapped; no settings row
Messages waiting for my update	Agent	Yes, on My Day	"Update" opens a plain lead page, not the question
Late / absent by 10:00	Owner (and a nudge to the agent)	A switch only	No team attendance screen exists

Event	Who should get it	In the design?	Tap opens
Agent goes outside / comes back	Owner	A switch only	Location and reason not shown anywhere
Leave request sent / approved	Owner, then agent	No	No approval screen
Hot lead, unit booked, deal won	Owner	No (hot lead: a switch)	Nothing
Feedback ticket, unusual sign-in, import finished	Owner	Badge or tab only	Nothing
Banner or project published	Agents	Yes	My Day

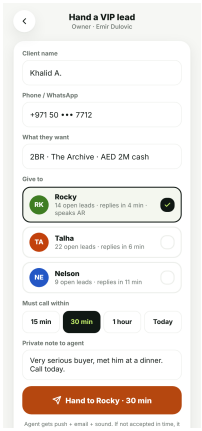

What to do

- **This week, no code needed:** add the three Firebase values in the hosting panel, then every person opens the CRM on their phone, adds it to the Home Screen and taps Allow. Check Health until it says 0 of 14.
- Give owners their own notification list and settings block (attendance, leave, VIP result, hot lead, booking, feedback).
- Every notification opens its own page. Group repeats into one. A banner should not send a push unless you switch it on.
- One take-back rule. The design shows 5 min, 24 min, 30 min and 2 h on different screens.

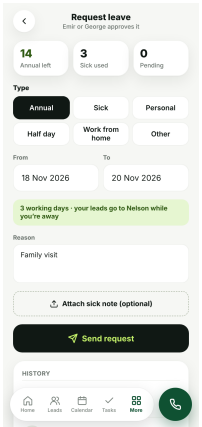

4. Owner (Emir)

The owner area has the right tools and plain names. The problem is depth: most owner screens show numbers but cannot be acted on.

Screen	Level	What happened	What a real person expects
Add lead + Hand VIP	**Blocker**	Lead must be typed twice; the two records are not linked; cannot mark VIP or pick an agent in Add lead.	One flow (see page 3).
Import	**Blocker**	No upload, mapping or duplicates review.	Keep the live 7-step import.
Leads	**Blocker**	Owner cannot see or move another agent's leads. "Move 31" on the dashboard does nothing.	All-leads list with an agent filter, and Reassign.
Attendance	**Blocker**	Only counts ("8 In · 1 Late · 1 Outside · 1 Missing"). No names, times, location or reason.	A "Team attendance today" screen and a month per agent.
Leave	**Blocker**	"Emir or George approves it", but no screen to approve or refuse.	A leave requests list with Approve / Refuse.
Home	**Major**	Owner lands on the agent home ("Good morning, Rocky"). Three screens name three different signed-in people.	An owner home.
Dashboard	**Major**	Today / Week / Month / Year change nothing. Cards cannot be opened. Sources add to 603, total says 863.	Filters work; a row opens its list.
Incoming	**Major**	Tapping an agent gives no result; only 4 agents as initials; owner's Call is blocked by the check-in rule.	"Given to Talha", card leaves the list; owners outside the rule.
Team & roles	**Major**	Shows 6 of 14 people. Invite sends at once with no form. No role change, reset or deactivate.	Full list and real actions.
Team live, activity	**Major**	Rows cannot be opened; "Review" on an unusual sign-in does nothing; no sign-out button.	Open an agent's day; sign out everywhere.
Manage projects	**Major**	Edit only shows "Editing…". The add form is pre-filled with "[Area]", "[AED x]" and can be published like that.	Edit opens the project; empty form with required fields.
Automations	**Major**	5-minute rule is only on/off. An import gives 42 leads at once: nobody can call 42 in 5 minutes.	Say which leads the rule covers; minutes can be set.

Hand a VIP lead: only 3 agents

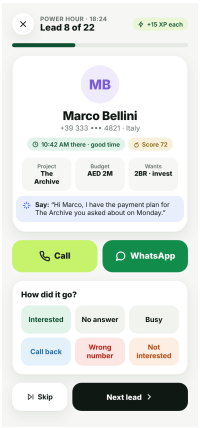

Leave: sent with a toast, nowhere to approve

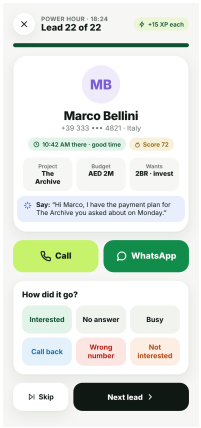

5. Broker: morning and calling (Rocky)

The check-in sheet is clear and appears on most call buttons. The rule has holes, and the dialer is not a real queue.

Screen	Level	What happened	What a real person expects
Dialer	**Major**	The dialer has no check of its own. "Call all 12", Notifications and Homes AI all reach it without check-in.	The rule sits on the dialer's Call button, so no path can skip it.
Dialer	**Major**	Next and Skip raise the counter, but the card always shows Marco Bellini. At 22 of 22 nothing happens.	A new lead each step; an end summary.
Any call button	**Major**	Calling Sara, Priya or Khalid opens the power dialer at "Lead 8 of 22" on Marco.	Calling one lead opens that lead.
Pipeline	**Major**	Call buttons do nothing.	Same as in My Leads.
Check-in sheet	**Major**	"Check in now" closes silently and the call does not start. "Working outside" loses the lead I wanted to call.	Confirm, then continue to the call.
All screens	**Major**	The clock disagrees: check in 08:55, sheet says 09:30, Attendance "9 h 58 m today", dialer 18:24.	One Dubai time everywhere.
My Day	**Major**	The VIP card with a countdown is about two screens down, under banners and counters.	VIP and overdue items right under check-in.
My Day	**Major**	"22 ready", "12 due today", "Call all 12" opens "8 of 22": the numbers for today do not match.	One number, same on every screen.
VIP card	**Major**	After Accept it returns to "Accept" when I come back; Call opens Marco's page.	Card goes away; Khalid is first in My Leads.
Dialer sheets	**Major**	"Pick date & time" has no picker (saved as "Call back set · Pick date & time"). "Book a meeting" saves text only.	A picker; the meeting form opens.
Incoming	**Major**	A broker sees the owner view and can give leads to other agents.	"Take this lead" only.
Search, Follow-ups	**Major**	Search results never change. Follow-up chips do not filter; no visible Done or Move.	Results follow typing; visible actions.

"Call all 12" before check-in: no sheet

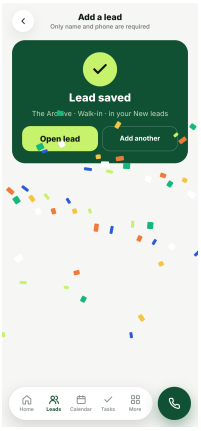

Lead 22 of 22, still Marco

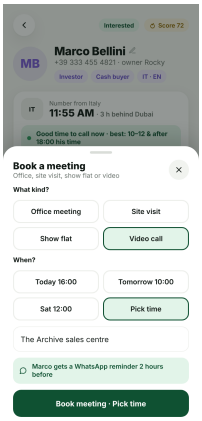

6. Broker: the life of a lead (Talha)

Talha's full table was not saved as a file, so this page is from his summary: 54 findings (1 Blocker, 32 Major).

Screen	Level	What happened	What a real person expects
Add lead	**Blocker**	Saves with name and phone empty ("Lead saved"). No duplicate warning. Typed text is wiped when a country, the WhatsApp switch or a Referral / Other box changes.	Required fields, duplicate result, nothing lost.
My Leads	**Major**	7 of the 8 tabs show the same 4 leads. Search does nothing.	Each tab its own list.
Lead, Leads, Follow-ups, Pipeline	**Major**	Marco's stage and next step are different on each screen.	One truth per lead.
Follow-up, Meeting sheets	**Major**	"Pick time" has no picker; a meeting is saved as "Pick time". The "What about?" text is dropped.	A picker; text is kept.
WhatsApp "what happened?"	**Major**	The "What did he say?" text is dropped. "Later" leaves no trace on the lead or My Day. "Not interested" moves to Lost with no reason.	Text saved; pending item shown; reason asked.
Won / Lost	**Major**	They flip with one tap.	A confirm step, and Undo.
Meeting sheet	**Major**	Promises an automatic WhatsApp reminder to the client. There is no WhatsApp API.	"Open WhatsApp to send the reminder".
Take-back rule	**Major**	Shows as 5 min, 24 min, 30 min and 2 h on different screens.	One rule.

Saved with empty name and phone

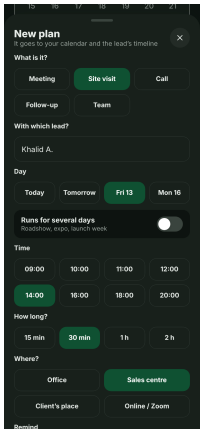

"Pick time" with no picker

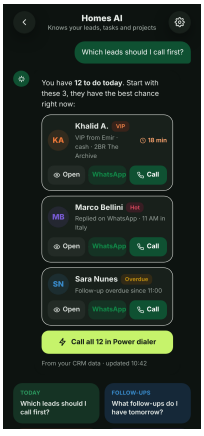

7. Broker: calendar, projects, AI (Yuliia)

Meeting results are explained in plain words and the month view reads well. Booking ahead is where it breaks.

Screen	Level	What happened	What a real person expects
New plan	**Blocker**	Day can only be Today, Tomorrow, Fri 13 or Mon 16. "Add a plan on Mon 23" saved on Fri 13 without warning.	A date picker; the day I tapped is pre-selected.
Calendar	**Major**	No next or previous month. Time is 8 fixed chips (no 13:00, 15:00, no half hours).	Any month, any time.
New plan	**Major**	Typed lead is ignored: always saved for Khalid. No title or note. No warning when two plans clash.	Search leads; title; clash warning.
Day list	**Major**	A plan cannot be opened, edited, moved or deleted.	Tap a plan for details and actions.
Meeting result	**Major**	"Booked a unit" saves with unit, price and amount empty; receipt button is dead. No "Cancelled" result.	Required fields; upload works; a Cancelled option.
Calendar wording	**Major**	Says it sends WhatsApp by itself ("WhatsApp sent", "Khalid got the new time").	The agent sends; the CRM logs it.
Tasks	**Major**	Day strip and tabs change nothing; "+" only says "Added"; ticking a site visit skips the result question.	Real lists; ticking a meeting asks how it went.
Projects	**Major**	Valia and Shahrukhz open The Archive page. "Send to client" asks for no client and opens nothing.	Own page per project; pick a lead, open WhatsApp.
Homes AI	**Major**	A typed question is replaced by "Which leads should I call first?". Call skips check-in; WhatsApp opens a LATER screen.	Answer the question asked; same rules as everywhere.

Tapped Mon 23: no such day in the sheet

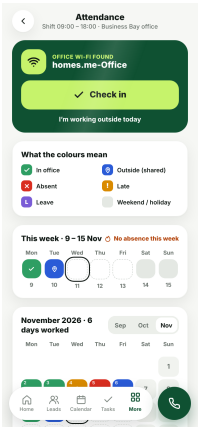

AI answers a different question

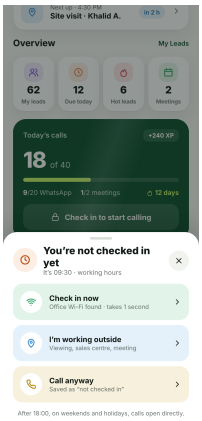

8. Broker: attendance and personal (Sultan)

Sultan's full table was not saved as a file, so this page is from his summary: 31 findings (14 Major).

Screen	Level	What happened	What a real person expects
My Day, Attendance, Working outside	**Major**	They disagree about today: "outside" shows as "not checked in" on Attendance; the outside trip is lost after coming back; the form ignores who and when I picked.	One status on all three.
Attendance	**Major**	One tap on Check out wipes the day and blocks calls again.	Confirm; keep the day's record.
Call rule	**Major**	No after-hours state exists. Only the text says "After 18:00… calls open directly".	The rule really follows the clock.
Leave request	**Major**	Confirms only with a "Sent" toast. No pending item, no approval route.	"Pending" in my list; a notification when answered.
Notifications	**Major**	No attendance or leave notifications for the agent (late nudge, welcome back, leave approved).	Add them.
Settings	**Major**	An agent sees the admin Settings ("Abdullah Mahi · Admin") and every owner screen.	Owner screens hidden for agents.
Personal information	**Major**	Save puts the old values back. Photo Change and Remove do nothing.	Edits stay; photo works.
Digital card	**Major**	A long name breaks the printed card layout.	Text shrinks or wraps.
Digital card	**Minor**	Card shows "Office 16" and "EMIGEO". Earlier you gave Office 12 and "Emigeo". The live card tool also says Office 16.	Please confirm which is right.

Outside, but Attendance says not checked in

After check-out, calls are blocked again

9. Live web CRM: what I saw

Checked on 12 Nov 2026 around 11:30 as Admin. I only looked. I typed a test name into the Add lead form to see its steps and closed it without saving.

The numbers that matter

On the live dashboard	Value	What it means
Follow-ups overdue across the team	93	Promises to clients that were not kept on time
Open leads with nothing planned	467–478	Leads nobody will come back to unless someone plans a step
Median first reply to a new lead	63,935 s (about 18 hours)	Target shown is 30 s. Per agent it ranges from 3 h to 23 h
Funnel, last 30 days	604 leads › 327 contacted › 3 qualified › 2 appointments › 0 reservations	The gap is after first contact
Attendance, last 30 days	284 days "not in", 24 late, 0 working outside	Check-in is new or not used yet

Problems on the live site

Where	Level	What I saw
Phone alerts	**Blocker**	Not switched on; 14 of 14 people have no device registered.
Notifications list	**Major**	17 identical "3 leads came back at once" messages, not grouped.
Lead page	**Major**	Call opens the phone directly: no check-in rule and no "how did it go?" afterwards. Activity shows computer words: "appointment_scheduled", "Assigned by sticky owner", "src:walk_in".
Add lead	**Minor**	With a duplicate number, Next does nothing and does not say why. Sources list Meta, Google, Instagram, Website, which you do not use; no "From owner".
Projects	**Major**	Only 2 projects, both "Sei Saadiyat", no prices. Leads point to The Archive, Shahrukhz, Damac Islands, Valia, Palace Residences, Al Seef.
"Test Agents" account	**Minor**	Appears in the leaderboard, as "Best of the week" on the wall, in attendance and in the assign list.
Leads	**Minor**	Junk names in the list: "United States", "Looks fake – verify", "ann".
Attendance	**Minor**	During my session the dashboard changed from the "I am here" button to "You are checked in · late 11:33" for Abdullah. I did not press that button knowingly; please check with Abdullah whether he did.

Already built on the live site (reuse, do not rebuild)

- Phone layout with a bottom bar, and install to Home Screen
- Light / Dark / Follow system theme
- Duplicate-number check, 7-step import, lead assignment with each agent's load
- Notification code that opens the right lead, with a Call button
- Attendance grid, team activity (who is online), team wall, automations

10. Problems that run through everything

- **Dark theme does not work** in the published design (my error, page 2).
- **Numbers, times and names disagree between screens.** The same lead has different stages; today's call count has four values; the clock shows five times in one session. Claude Code will not know which one is right.
- **The design promises automatic WhatsApp** in about ten places ("WhatsApp sent", no-show message, client reminder). You decided there is no WhatsApp API. Every one must become "open WhatsApp, the agent sends, the CRM logs it".
- **Roles are mixed.** An agent can open every owner screen; the owner has no home of his own.
- **Many controls only show a small confirmation.** That was my quick fix yesterday so no button was dead. It hides that pickers, forms and lists behind them are not designed (date and time pickers, invite form, edit project, open a ticket).

What works well

- The check-in sheet: three clear choices in plain words.
- VIP hand-off idea: agent load, deadline chips, "Accepted · Emir notified".
- WhatsApp and Telegram tracking: honest about what can be measured, and the owner report adds up.
- Attendance colour guide and month view; the install guide; meeting results explained in plain words.
- No script errors on any screen opened by any tester.

11. Fix plan, in order

#	What	Who	Size
1	Switch on phone alerts on the live site (3 Firebase values), then everyone installs and taps Allow	Your developer + team	Hours
2	Fix the dark theme in the design (theme variables)	Me	Small
3	Close the 8 blockers in the design: owner add + VIP in one flow; import (use live); required fields and duplicates; owner all-leads and reassign; team attendance screen; leave approval; date picker in calendar	Me	Medium
4	Make the call rule sit on the dialer itself; make the dialer a real queue; one lead = one page	Me	Medium
5	One truth for sample data: one clock, one stage per lead, one count for today, one take-back rule	Me	Medium
6	Reword every automatic-WhatsApp promise; hide owner screens from agents; add the owner home and owner notifications	Me	Medium
7	Update the master prompt: "reuse what the live site has" (install, theme, import, duplicates, push code) and add the decisions from this audit	Me	Small
8	Run the same 5 testers again, then give Claude Code the package	Me	Small
9	Clean the live data: delete "TEST Claude" and the "Test Agents" account, fix the two "Sei Saadiyat" projects, add the real projects	You / Admin	Small

Three things only you can decide

- Do owners and Admin have to check in before calling, or are they outside the rule?
- The take-back rule: how many minutes for a VIP lead, and how long for imported leads?
- Office number on the card: 16 or 12?
