Team test, round 2

12 November 2026 · one owner and four agents tested the fixed design, then the problems they found were fixed

In short

• Every button works. One tester opened 53 screens as agent and as owner and tapped every button: 0 code errors, 0 dead buttons, 0 broken links.
• The check-in rule works on all 11 call buttons. Agents cannot open any of the 20 owner pages.
• The testers still found 2 blockers, 69 major and 53 minor problems. Many are the same problem seen by two or three testers.
• After the test, both blockers and most of the major problems were fixed. Then the open list on page 3 was fixed too.
• The fixes on page 2 were checked by me in the phone simulator. The testers have not seen them yet.

What each tester found

Tester	Tested	Old problems	New: blocker / major / minor
Emir (owner)	Add and give VIP lead, import, all leads, team, leave, owner settings	4 fixed, 3 partly, 0 not fixed	1 / 14 / 10
Rocky (agent)	Calling day: check-in rule, calling list, VIP card, WhatsApp follow-up	3 fixed, 4 partly, 1 not fixed	0 / 15 / 10
Talha (agent)	Calendar, meetings, lead page, tasks, projects	5 fixed, 6 partly, 1 not fixed	1 / 17 / 13
Yuliia (agent)	Attendance, working outside, leave, profile, dark theme	25 fixed, 6 partly, 18 not fixed, 10 not checked	0 / 9 / 13
Sultan (new agent)	Every button on every screen, simple words	8 fixed, 2 partly, 10 not fixed	0 / 14 / 7

The two blockers (both fixed)

Blocker	What was wrong	Now
Owner lands in an agent's pages	Home, Leads and Back sent the owner to "Good afternoon, Rocky" with a Check in button.	Home opens Owner home, Leads opens All leads, Settings shows the owner's name.
No date on the lead page	"Pick date and time" for a follow-up or a meeting showed no date field.	The date and time fields appear.

What was fixed after this test

Area	Fixed now
Leads	Each lead opens its own page (before, every lead opened Marco). Call on a lead page calls that lead. "Start calling" opens the list of 12. Search finds a phone number. A link to free leads in Incoming.
Calling list	The same 12 leads as "Today" in My Leads, with the VIP lead first. Strange codes in the script text are gone. You cannot go to the next lead after a call without saying what happened. An empty "new number" is no longer saved.
One story in the sample data	The VIP lead Khalid is new and not called on every screen. The 12:00 meeting and its notification are the same person. Sara is not "Won" any more. Prices, stages and local times match. Pipeline adds up to 62.
No more risky one-tap actions	Refusing a VIP lead needs two taps, has Undo, and the lead leaves your lists. A follow-up marked Done asks what happened. Pipeline no longer moves a lead to Won in one tap. Delete plan, share all Incoming leads, deactivate a person and make someone Owner all ask first.
Won and Booked	The lead page now asks for unit, price, amount paid and the receipt, the same as the Calendar. Paid cannot be more than the price.
Add lead	Nothing is chosen for you any more. Lead source is needed. Giving a lead to an agent on leave or absent is blocked. The duplicate check also finds Khalid's number and checks the country.
Calendar	Week and day arrows cross months. The clash warning sees overlapping plans. The lead must be picked from the list. Past days are refused. The meeting question shows only on its own day. Changing a plan keeps its length.
Owner screens	One agent list of 10 everywhere, with who is on leave or absent. Numbers match between Owner home, Dashboard and Team live. Owner home links open All leads with the right filter. Owner notifications are in time order, open the lead itself, and include "leads waiting in Incoming".
Import	The confirm page shows the real agents and the real count. Changing a column says what happened to the other column. Budget is imported.
Attendance	Check-in shows the real time and "late". My Day and Attendance show the outside place you typed. You can end the day from outside. "Where exactly" is no longer filled in for you.
Other	Notifications open the right tab or sheet. Leave request shows the right dates and refuses days off and past days. Feedback cannot be sent empty. Dark theme switches now show on and off correctly.

The "still open" list: now fixed too

After you asked, the open list was also fixed in the design. Checked in the phone simulator: all 66 screen files, as agent and as owner, light and dark, 0 code errors.

Area	Fixed now
Team screens	Each card opens that colleague, with his own numbers. Search and filters work. One team count (10 agents). Team wall has a Post button and the claps count. Phone and WhatsApp to a colleague are plain: nothing is logged and no check-in is asked.
Homes AI	It answers the question you type (meetings, who to call first, overdue follow-ups, projects, a WhatsApp text) and gives a button to the right page. Enter works.
Lead page	Tap any line to change it; the change is written on the timeline. Files tab lists files and adds a photo, booking form or ID. New follow-ups, meetings and notes show on the timeline. Log lines say "opened WhatsApp", not "sent". Owners get a "give to another agent" button.
Tasks	Any week and any day. A task can be for a lead, and can be changed, moved or deleted. A meeting result cannot be given before the meeting time; "moved" and "booked" go to the Calendar for the details.
Calendar	A plan over several days can cross into the next month. Month view starts on Monday like the week view. Old meetings show their result.
Attendance and profile	Today shows the office time and the outside trip together. Personal information keeps your changes, needs the BRN, and the photo buttons work. Profile numbers match the other screens. Settings switches are remembered.
Owner	Dashboard period buttons change the numbers. Team activity has tabs, sign-out and review. Desks can be added, edited and deleted. Attendance rules can be edited (Wi-Fi, shift, days off). Refusing leave asks a reason and can be changed.
VIP timer	Counts down every second.
Dark theme	Feedback tiles, Install guide cards, weekend days, chips and status badges are now dark.
Small things	Login needs email and password. EOI, SPA and XP are replaced by simple words. Task ticks and switches are bigger.

What is really still open (small)

• When you open another lead, the name changes but the sample details (project, country, notes) are still Marco's. In the real CRM each lead has its own data.
• Security page accepts an empty new password. The digital card "Send on WhatsApp" opens the LATER chat screen.
• Language switch (English / Arabic) is only a button. Search does not find screens like "leave" or "profile".
• My Day shows "calls today 18 of 40" before check-in. Team live and Home banners still have a few chips that only show a message.
• Old meetings cannot get a new result. Day and week view have no Today button. Some small links are under 44 px.
• The testers have not re-tested this last round of fixes. I checked them myself.

My advice

• The design is now good enough to give to Claude Code for the main flows: leads, calling, VIP, import, calendar, attendance, notifications, owner pages.
• Give Claude Code the short "really still open" list too, so it builds those parts properly.
• Most problems in both rounds were about sample data that did not match between screens. In the real CRM this cannot happen, because every screen reads the same database.

Questions for you

• Office number on the business card: 16 or 12?
• Company name on the card: "Emigeo" or "EMIGEO"?
• Should owners also check in before calling? (Now: no.)
• Take-back times: VIP 30 minutes, imported leads 24 hours. OK?
